

Manual Uji Coba Payroll (Kab. Maluku Tengah)

Tanggal: 16 Maret 2026

Tujuan

- Menyiapkan data pendukung payroll dan menjalankan uji coba payroll utama.
- Mendokumentasikan hasil uji coba payroll untuk tenant Kab. Maluku Tengah.

Prasyarat

- Repo berjalan pada `http://127.0.0.1:5173`.
- Kredensial `org_admin centralized` valid di `ops/test-accounts.local.json`.
- Gunakan `.env.online` (Supabase remote).

Ringkasan Tenant

- Tenant: Kab. Maluku Tengah
- Tenant ID: `ba7603b1-6827-4370-ae86-2e70dc5b09d5`

Data Pendukung Payroll

1. Backup Supabase (wajib sebelum perubahan data)

```
npm run db:backup:supabase
```

Contoh output:

```
/Users/user/Documents/ANTI_GRAVITY_PROJECT/ABSENSIKU/artifacts/db-backups/sql/supabase_backup_20260316_154149_manual.sql
```

2. Sisipkan data absensi uji coba untuk 4 pegawai

```
set -a; source .env.online; psql "$SUPABASE_DB_URL" -c
"with candidates as (
  select id, office_id
  from employees
  where tenant_id = 'ba7603b1-6827-4370-ae86-2e70dc5b09d5'
  and is_active = true
  and id <> 'b26b1414-618e-43cf-b084-7fd781019281'
  and office_id is not null
  order by created_at desc
```

```

        limit 4
    ), rows as (
        select
            id as employee_id,
            office_id,
            (current_date - 1) as date,
            (current_date - 1)::timestamp + time '08:10' as
check_in_time,
            (current_date - 1)::timestamp + time '16:45' as
check_out_time,
            'hadir'::attendance_status as status,
            'seed uji coba payroll'::text as notes
        from candidates
    ), ins as (
        insert into attendance_records_partitioned (
            employee_id,
            office_id,
            date,
            check_in_time,
            check_out_time,
            status,
            notes
        )
        select r.employee_id, r.office_id, r.date,
r.check_in_time, r.check_out_time, r.status, r.notes
        from rows r
        where not exists (
            select 1
            from attendance_records_partitioned ar
            where ar.employee_id = r.employee_id and ar.date =
r.date
        )
        returning employee_id
    )
select count(*) as inserted_rows from ins;"

```

3. Buat periode payroll (draft)

```

set -a; source .env.online; psql "$SUPABASE_DB_URL" -c
"insert into payroll_periods (
    tenant_id,

```

```
    period_key,  
    period_start,  
    period_end,  
    cutoff_date,  
    status,  
    notes  
  ) values (  
    'ba7603b1-6827-4370-ae86-2e70dc5b09d5',  
    to_char(current_date, 'YYYY-MM'),  
    date_trunc('month', current_date)::date,  
    (date_trunc('month', current_date) + interval '1 month -  
1 day')::date,  
    (date_trunc('month', current_date) + interval '1 month -  
1 day')::date,  
    'draft',  
    'seed periode payroll uji coba'  
  ) returning id, period_key, period_start, period_end,  
  status;"
```

Langkah Uji Coba Payroll

1. Preflight sandbox localhost

```
npm run ops:sandbox:doctor:strict
```

2. Jalankan Playwright payroll smoke

```
npm run e2e:hr:payroll:smoke
```

3. Jalankan Playwright payroll CRUD

```
npm run e2e:hr:payroll:crud
```

Hasil Uji Coba

- Playwright payroll-smoke: 11 tests passed.
- Playwright payroll-crud: 7 passed, 2 skipped.
- Skip terjadi pada flow run + approval (dialog Proses Payroll tidak muncul atau akses terbatas).

Artefak

- Playwright report: `artifacts/playwright-report-hr-payroll-smoke`
- Playwright report: `artifacts/playwright-report-hr-payroll-crud`
- Test results: `test-results/`

Catatan Risiko

- Data absensi uji coba tersimpan di Supabase remote.
- Jika perlu coverage penuh run + approval, pastikan akses payroll run engine dan approval aktif.
